## DoubleChooz Experiment: Latest Results for Antineutrino Applied Detection

Wednesday, 20 September 2023 11:25 (20 minutes)

The latest results of the DoubleChooz experiment in the context of applied antineutrino detection will be summarised in this talk. DoubleChooz experimental set-up, based at the EDF Chooz nuclear reactor (France), offers full reactor power modulation data. This enables DoubleChooz to achieve today's world precision on the reactor flux measurement using reactor-on data and a precise spectral characterisation with reactor-off data.

## Abstract title

DoubleChooz Experiment: Latest Results for Antineutrino Applied Detection

Presenter: BEZERRA, Thiago (University of Sussex)

Session Classification: Global projects
