NOT TO SCALE

The Discovery of Antimatter

1928

$$\left(\beta mc^2 + c \sum_{n=1}^3 \alpha_n p_n \right) \psi(x, t) = i\hbar \frac{\partial \psi(x, t)}{\partial t}$$

ELECTRON

Paul Dirac

The Discovery of Antimatter

1928

$$\left(\beta mc^2 + c \sum_{n=1}^3 \alpha_n p_n \right) \psi(x, t) = i\hbar \frac{\partial \psi(x, t)}{\partial t}$$

SOLUTION: contains a square root

$$x^2 = 4$$

$$x = +2 \quad x = -2$$

Paul Dirac

What is the force between the weight and the Earth?

$$F = \frac{GMm}{r^2}$$

What is the acceleration of the weights?

$$F = ma$$

$$a = \frac{GM}{r^2} \approx 9.81 \text{ m/s}^2$$

Einstein

William Fairbank

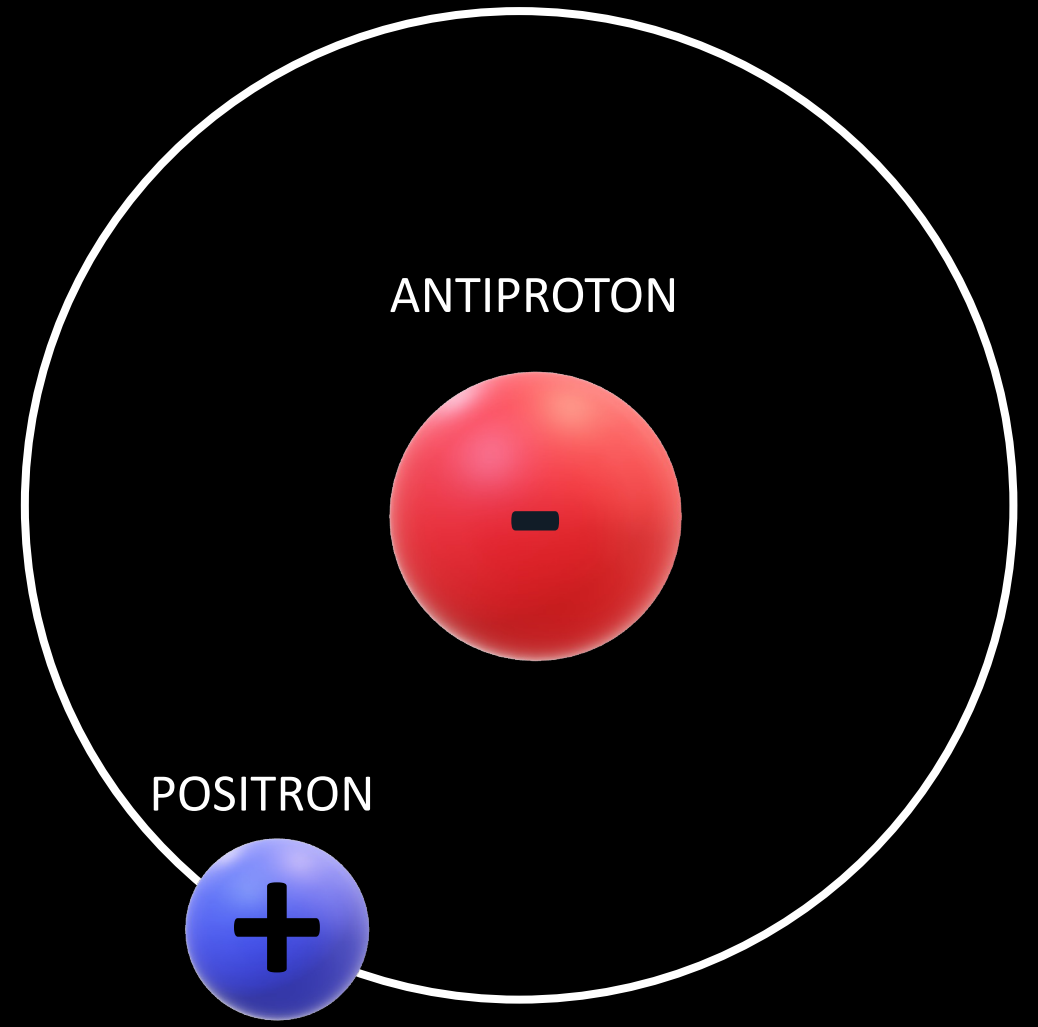

- The Weak Equivalence Principle (WEP) insists antimatter will fall in exactly the same way as normal matter.
- No WEP-breaking process has ever been found.
- WEP violation could solve the matter antimatter asymmetry.

Podcast Episode

Experimenting with Antimatter

NSF's Discovery Files

Oct 2023 · 20 min 50 sec

Episode Description

Timothy Tharp, assistant professor at Marquette University; Danielle Hodgkinson, postdoctoral fellow at University of California, Berkeley; and Andrew Christensen a senior graduate student at UC Berkeley all contributed to the success of the Alpha-g experiment at the European Organization for Nuclear Research (CERN), testing gravity's effect on antimatter. We'll hear about what roles they played, challenges they faced and what's next for the group.

Where does ALPHA get their positrons from?

Naturally: Radioactivity! Beta plus decay of ^{22}Na

Where does ALPHA get their positrons from?

- Positrons come from a really strong radioactive source: 2 Gbq

What does 2 Gbq mean?

2,000,000,000 radio active decays per second...

How many bananas is 2 Gbq?

- a) 2 million bananas
- b) 2 million tons of bananas
- c) 2 billion tons of bananas
- d) The weight of the moon in bananas
- e) The weight of the sun in bananas

How many bananas is 2 Gbq?

- a) 2 million bananas
- b) 2 million tons of bananas
- c) 2 billion tons of bananas
- d) The weight of the moon in bananas
- e) The weight of the sun in bananas

c) ~2 billion tons of Bananas [1]

Where does the AD get antiprotons from?

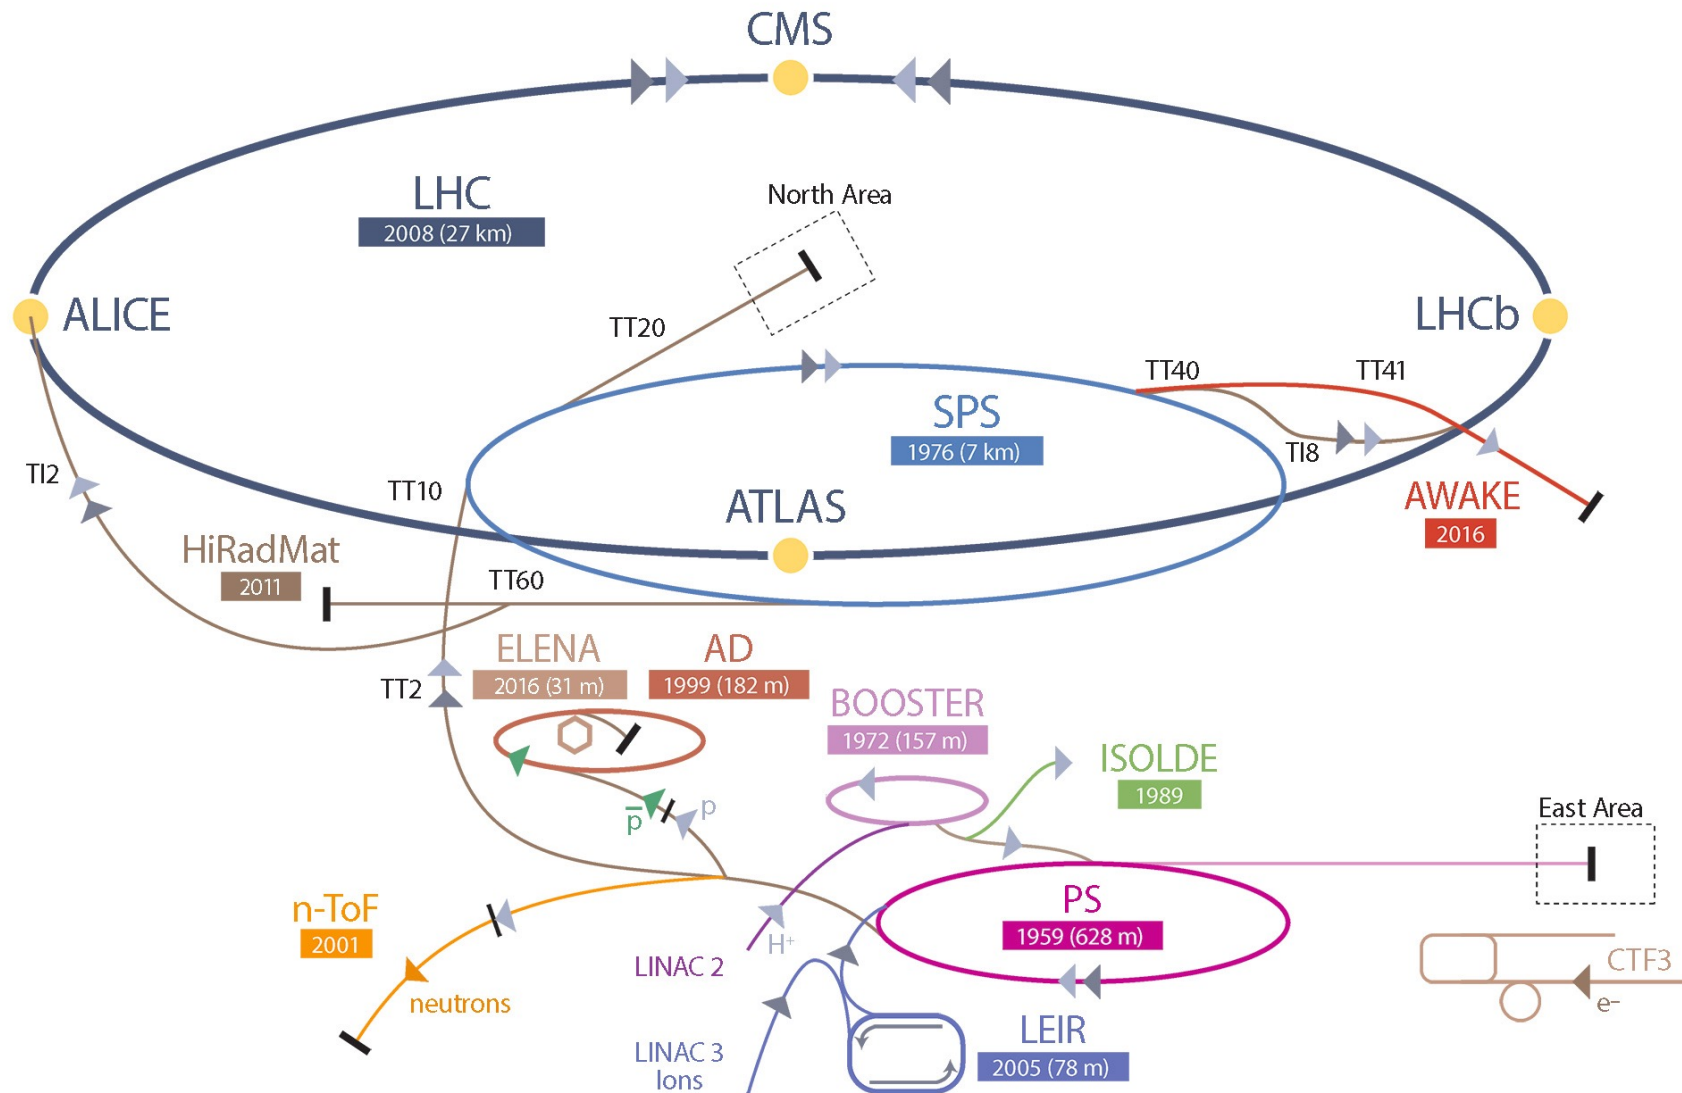

The Bevatron in 1958 (Image: Lawrence Berkeley National Laboratory)

Antiproton Discovery: Chamberlain and Segre 1955

CERN's Accelerator Complex

▶ p (proton) ▶ ion ▶ neutrons ▶ \bar{p} (antiproton) ▶ electron ▶ \leftrightarrow proton/antiproton conversion
