

GIT workshop (Joao Bento / LJMU)

Tuesday, 16 July 2024 10:30 (2 hours)

Git is the fundamental tool for version control and collaborative coding and is easily the most widely used piece of software by developers worldwide. As such, it is a critical skill in the arsenal of anyone who does any kind of development. In this session, we will introduce the foundations of git, motivate the use of this tool, and proceed with a hands-on workshop in which you will use git in practice on new and existing code repositories. In order to participate in this hands-on workshop, you will need to have git installed on your system, a modern integrated development environment also installed (such as Visual Studio Code), and an account on Github already setup to authenticate with your computer.

Presenter: BENTO, Joao (LJMU)
