

- Run 4/5/6 analysis nearing completion:
  - Most of the subsections are working through 'external' reviews now – ie. Collaboration members not directly on that part are reading documentation, commenting.
  - A few are still finalising documentation, will enter internal review soon.
  - Collaboration meeting 11<sup>th</sup> - 13<sup>th</sup> Dec at Fermilab to share status of everything!
- Expecting to have results public ~ early-mid 2025: 2x better precision.
- Several papers currently in progress: main  $\omega_a$  result paper, operations, computing, storage ring.
- Collaboration management: new ED&I committee, Lorenzo and Estifa'a are on it!

# g-2 (EDM) news

- Run 2/3 EDM analysis is also very close to being complete:
  - Has (partially) been in external review since early Oct, with some incomplete documentation.
  - We've been answering reviewer comments + finishing things up since then.
  - Final analysis note will be sent off today!
- Using the collaboration meeting to launch the collaboration-wide review.
- Unblinding + publishing results in Jan 2025 (hopefully).
