

EDM updates

- Some delay in the Run 2/3 analysis since last meeting, needed to check a few final things.
 - All are mostly done now, with one final study (CBO) nearing completion in the next few weeks.
- Katie also now looking at Run 2/3 data using up/down asymmetry – once unblinded, comparison will give us another check of methods etc.
- Given delay, we wanted to do some bonus checks which needed retracking of data/MC: working with g-2 production team, but large delay in Jan due to grid issues, likely will not be done for Run 2/3 (but will for 4/5/6 and final combination).
- Unblinding procedures etc. in collaboration review: hoping to get all that sorted soon in order to move towards results/paper!

- Progress made across all analysis thrusts towards finishing up analysis/documentation and moving from internal (analysis group) reviews to external reviews this month:
 - ω_a : moving steadily through getting analysis parts blessed internally.
 - Field: aim to wrap up internal reviews around now-ish.
 - Beam dynamics: has some parts already in external review, others moving over soon.
- Computing paper has also gone through a round of reviews and has been rewritten to address them, is almost ready for a second round of comments.
- Run 1/2/3 papers at just under 3000 citations (2995)!
