

Status of Strong2020 activity for a database of e^+e^- into hadrons

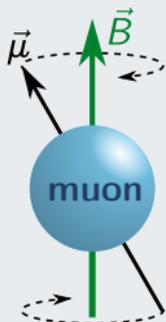

Alberto Lusiani
Scuola Normale Superiore and INFN, sezione di Pisa

Muon Precision Physics Workshop, 7-9 November 2022, The Spine, Liverpool, UK

Introduction

Muon spin precession

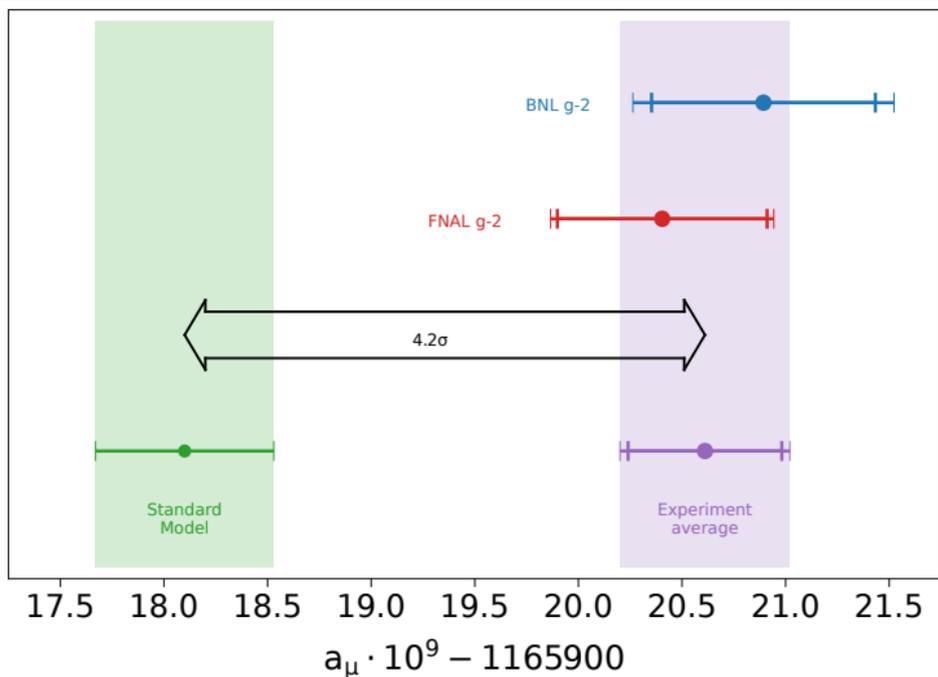

Muon $g-2$ anomaly

$$a_{\mu}^{\text{exp}} - a_{\mu}^{\text{th}} = +251(59) \cdot 10^{-11}$$

$$\Delta a_{\mu}^{\text{exp}} = 41 \cdot 10^{-11}$$

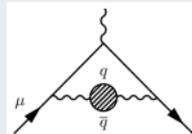

$$\Delta a_{\mu}^{\text{th}} = 43 \cdot 10^{-11}$$

Muon magnetic anomaly discrepancy, April 2021

Introduction

$$\Delta a_\mu^{\text{th}} \times 10^{11} = 43 = 40(\text{HVP,LO})(\dots)$$

$a_\mu^{\text{HVP,LO}}$ computation

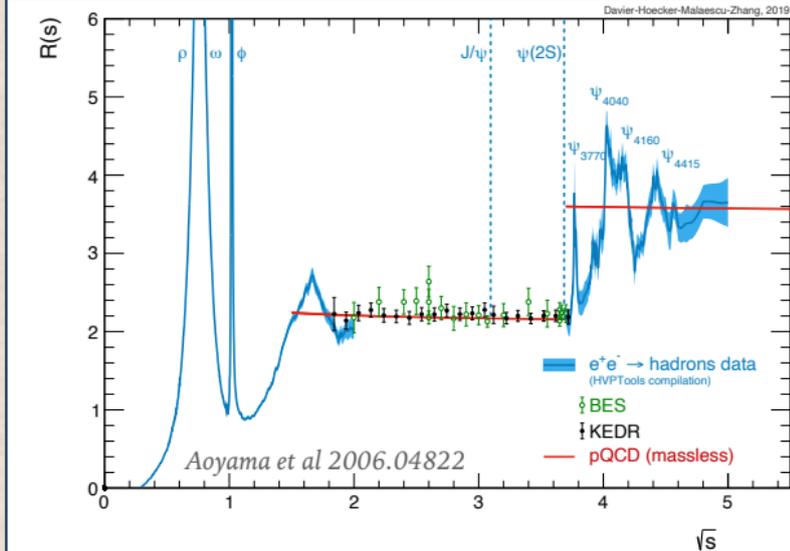

$$a_\mu^{\text{HVP,LO}} = \left(\frac{\alpha m_\mu}{3\pi}\right)^2 \int_{m_\pi^2}^{\infty} \frac{\hat{K}(s)}{s^2} R(s) ds$$

$$R(s) = \frac{\sigma^0(e^+e^- \rightarrow \text{hadrons}(\gamma))(s)}{\sigma^0(e^+e^- \rightarrow \mu^+\mu^-(\gamma))(s)}$$

cross sections $\sigma^0(\dots(\gamma))$

- ▶ inclusive of higher order radiative processes
- ▶ subtracted of HVP contribution to photon propagator
- ▶ $\Delta a_\mu^{\text{HVP,LO}} = 0.57\%$ now
but 0.23% desirable in near future to match experimental precision

$R(s)$ as measured by experiments

Strong 2020 / PrecisionSM

Strong-2020

- ▶ EU Horizon 2020 grant agreement n. 824093

“The strong interaction at the frontier of knowledge: fundamental research and applications”

<http://www.strong-2020.eu/>

PrecisionSM

- ▶ Strong-2020 Work Package 21, RA3-**PrecisionSM**: “Precision Tests of the Standard Model”
 - ▶ goal: annotated database for low-energy hadronic cross sections in e^+e^- collisions, started in 2019
 - ▶ coordinators: Andrzej Kupsc, Graziano Venanzoni
 - ▶ work-in-progress web site: <https://precision-sm.github.io/>

Strong 2020 / PrecisionSM plans

- ▶ publish on web **annotated database of hadronic cross-section measurements** for computation of the HVP,LO contribution to muon magnetic anomaly
- ▶ rely on **$\sigma(e^+e^- \rightarrow \text{hadrons})$ measurements HEPData records**
 - ▶ links to HEPData records
 - ▶ group measurements in categories
 - ▶ use tags to label useful properties
 - ▶ responsive plots of hadronic cross-sections, **relying on work by Fedor Ignatov**
 - ▶ documentation and code examples on how to use HEPData records
- ▶ prepare collaborative framework for ultimate goals such as full open-source calculation of $a_\mu^{\text{HVP,LO}}$

HEPData, funded by a UK STFC grant, based at IPPP, Durham University

Graeme Watt

IPPP, Durham University
Project Manager (2013-)

Michael Spannowsky

IPPP, Durham University
Principal Investigator (2019-)

HEPData.net

- ▶ HEP data public storage web site, mainly used by LHC experiments
- ▶ well defined submission data format, functionally adequate for our data of interest
- ▶ uses YAML and JSON, can export to Root format and other formats
- ▶ measurements on [HEPData.net](https://hepdata.net) link their [InspireHEP.net](https://inspirehep.net) publication and [InspireHEP.net](https://inspirehep.net) back-links [HEPData.net](https://hepdata.net)
- ▶ possible to download data and metadata programmatically
- ▶ submissions are done by authorized contact persons of collaborations
 - ▶ higher quality and reliability than first phase submissions done by just HEPData personnel
- ▶ some experiments (mainly LHC ones) quite active in promptly uploading their published data

HEPData, example of stored hadronic cross-section measurement

Campaign to submit existing measurements to HEPData

- ▶ large amount of $\sigma(e^+e^- \rightarrow \text{hadrons})$ measurements published, but not in HEPData
- ▶ most old or non-operative collaborations do not have a HEPData submission coordinator
- ▶ PrecisionSM coordinates & collaborates to submission of published measurements, (starting with $\sigma[e^+e^- \rightarrow \pi^+\pi^-(\gamma)]$)
- ▶ HEPData authorized a PrecisionSM submission coordinator (A.L.)

HEPData submission

- ▶ experimental collaboration nominates submission coordinator
- ▶ for each measurement, coordinator appoints & authorizes submission uploader and submission reviewer
- ▶ HEPData web site
 - ▶ provides forms for authorized uploading of data and meta-data
 - ▶ checks data and presents draft publication of uploaded information
 - ▶ handles review and publication approval steps

Campaign to submit existing measurements to HEPData

PrecisionSM, measurement database in YAML text file

- ▶ standard text format for numeric and text data
- ▶ easy to edit manually
- ▶ easily “versioned” in git repository
- ▶ easily read/write in Python, C++, etc.
- ▶ programmatically converted to web pages

example measurement entry in YAML DB

```

inspirehep-100180:
  channel: $\pi^+\pi^-$

PrecisionSM website display of annotated DB (work-in-progress)

The image shows three overlapping browser windows from the PrecisionSM website. The top window shows the main site with a navigation menu and a search bar. A red arrow points from the 'Measurements Database' link in the sidebar to the middle window. The middle window displays the 'Measurements Database' page, which includes a '(download)' link and a table of data. A red arrow points from the table to the bottom window. The bottom window shows a detailed view of a specific entry: $\pi^+\pi^-$, BCF (ADONE, Frascati), 1975.

PrecisionSM web site: collaborative framework on github.com

- ▶ measurement data base and source web site files on Github repository
- ▶ Nikola static web generator generates website (= HTML, CSS and javascript)
- ▶ simple procedure to publish on Github Pages at <https://precision-sm.github.io/>
- ▶ web pages are edited in simplified markup languages like Markdown
 - ▶ but HTML, CSS and Javascript can be used if desired
- ▶ collaborators can be added as editors of Github repository
- ▶ git repository keeps tracks of all changes and resolves editing conflicts
- ▶ Anna Driutti in Pisa has started collaborating

PrecisionSM workshop in November 2021

<https://agenda.infn.it/event/28089/> (proceedings [arXiv:2201.12102](https://arxiv.org/abs/2201.12102) [[hep-ph](#)]).

The screenshot shows the website for the STRONG2020 Virtual Workshop. The header is blue and contains the event title: "STRONG 2020 Virtual Workshop on 'Spacelike and Timelike determination of the Hadronic Leading Order contribution to the Muon g-2'". The logo for STRONG2020 is prominently displayed, featuring the word "STRONG" in blue and "2020" in white with a European Union flag motif. Below the header, the date "Nov 24 – 26, 2021" and the time zone "Europe/Rome timezone" are shown. A search bar is located on the right side of the header. The main content area is divided into a left sidebar with a navigation menu and a main text area. The navigation menu includes: Overview, Scientific Program, Call for Abstracts, Timetable, Contribution List, Book of Abstracts, Registration, Participant List, Program committee, and Proceedings. The main text area contains a description of the workshop, stating it is the first of its kind for WP21: JRA3-PRECISION TESTS OF THE STANDARD MODEL, and will be held online from Wednesday November 24 to Friday 26, with zoom sessions of 3 hours each day. It also mentions that a book of abstracts will be submitted to ArXiv. Below the description, the start and end times are listed: "Starts Nov 24, 2021, 2:00 PM" and "Ends Nov 26, 2021, 5:00 PM", both in the Europe/Rome time zone. At the bottom of the page, there is a registration section with a blue button that says "Register now" and a status message: "Registration for this event is currently open." The registration button shows a user count of 123.

Summary

- ▶ Strong2020 PrecisionSM Web site at <https://precision-sm.github.io/>
- ▶ started campaign of submission of published $\sigma(e^+e^- \rightarrow \text{hadrons})$ measurements to HEPData
- ▶ annotated database of $\sigma(e^+e^- \rightarrow \text{hadrons})$ measurements being assembled
- ▶ interactive visualization of data in responsive plots
- ▶ initial documentation with example code
- ▶ ultimate goal: open source calculation of $a_\mu^{\text{HVP,LO}}$
